

SURVIVING CANCER

A Portrait of Hope

 **Upper Chesapeake
Cancer LifeNet**

Facing Cancer Together

Donna Potter & Family

Breast Cancer

With just one word, Cancer, my life at age 45 changed dramatically. Diagnosed with breast cancer and then two years later, diagnosed with metastasized breast cancer to the bone, I needed information and help. My family, husband and 3 children, needed help too. I found out about Upper Chesapeake Health CancerLifeNet and it was an unbelievable relief. I received counseling, information, alternative suggestions, physician support and a caring team of support professionals. They continually contacted me to make sure my pain was under control, that the Climb program my son attended met his needs, that my 22 year old daughter was informed of genetic testing, and that my doctor and I had the best possible communication. I am thankful for this outstanding service and hope others learn of this community outreach program and take full advantage.

It has made my life much more manageable and added compassion and caring.
